The sequences are useful in the preparation of a for treating a condition responsive to a PRO polypeptide. The sare useful in a number of functional biological assays, as eight markers for protein electrophoresis and as therapeutic 9 9 ad PRO polypeptides e.g. PRO1491 and PRO1571, useful in the of a medicament for treating a condition responsive to PRO and as therapeutic agents e.g. vaccines. H.H. Baker KP, Botstein D, Desnoyers L, Eaton DL, Ferrara N, Gaod W, Goddard A, Godowski PJ, Grimaldi JC, Gurney AL, Pan J, Paoni NF, Roy MA, Smith V, Stewart TA, Tumas D, Williams PM, Wood WI;

Novel isolated PRO polypeptides e.g., PRO1130, PRO1275, PRO141 PRO1787 affect glucose or free fatty acid (FFA) uptake by skel cells and are useful for treating diabetes or hyper- or hypo-i WPI; 2003-874602/81. P-PSDB; ADD70695.

The invention relates to an isolated PRO polypeptide (secreted Claim 2; SEQ ID NO 179; 553pp; English.

New secreted and transmembrane PRO polypeptides useful for tre cancers, kidney disorders, Crohn's disease, diabetes mellitus, hypo-insulinemia, sports injuries and arthritis.

2; SEQ ID NO 179; 557pp; English. Claim

transmembrane protein) having at least 80% amino acid sequence to an amino acid sequence chosen from 1.33 fully defined sequence given in the specification (including their extracellular dome or without their associated signal peptides. Also include are inuclectide (NA) sequences encoding PRO, a vector comprising the host cell comprising the vector, producing PRO, a chimaeric molomprising PRO fused to a heterologous amino acid sequence, and The invention relates to an isolated PRO polypeptide (secreted

dy. Pro is useful as molecular weight markers for protein resis and also for chromosome identification. PRO is also tissue typing. PRO and PRO NA are useful as hybridisation a cDNA library to isolate the full-length PRO CDNA. PRO NA is generating transgenic animals or knock-out animals which are development and screening useful reagents. PRO NA is also gene therapy. PRO1244, PRO1286 and PRO1303 polypeptides are treating cancerous tumours. PRO1250, PRO1418 and PRO1410 les are useful for suppressing immune response. PRO1246 le is useful for treating cardiac insufficiency disorders. Mypeptide are useful for treating candium flux in human vale endocherial cells. PRO1255, PRO1255 and PRO1474 les are useful for treating bone and/or cartilage disorders intitis) and wound healing. PRO130, PRO1275 and PRO1418 les are useful for treating diabetes in skeletal muscle cells is thitis. PRO1265, PRO1265, PRO144 and PRO1382 polypeptides are useful for preased diabetes in skeletal muscle cells in the present intra coellac disease, dermattis, herpetiformis or Crohn's PRO1265, PRO1265, PRO1212, PRO1212, PRO1304, PRO1306, PRO1418, in PRO1265, PRO1412, PRO1279, PRO1306, PRO1418, incodes a PRO protein of the invention.

This CDS clone is a part of a collection of human full expression clones generated by BD Biosciences Clontech Harvard Institute of Proteomics. Bach CDS has been clor forms: with and without stop-codon (to allow fusion wit tag). The CDS has been directionally cloned using BJ cloning system between the SalI and HindIII sites of t vector. Additional sequences in the clone: 'AcC' after and before 'Afd' to provide Kozak consensus sequence;' last codon and before HindIII site to maintain reading
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           artificial sequences.

Sequence Quality Assessment:
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible GenBank flat file format but are available as part of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise all regions were either double-stranded or sequenced wi alternate chemistry or covered by high quality data (i. quality >= 30); an attempt was made to resolve all seque problems, such as compressions and repeats; all regions covered by at least one plasmid subclone or more than or subclone; and the assembly was confirmed by restriction

fingerprinting marginary of the experimentally deriver fragments with sequence-predicted fragments is given be the electronically-disperted sequence consists of both vector, in order to accurately represent the entire of Small fragments below a variable cutoff (approximately are not resolved in the fingerprint and hence do not a in the table. There are no significant remaining discribetween the experimental and predicted values. Uniquel fragments are separated by dashed lines. This sequence has been validated by Multiple Complete Sequence Validation:

This CDS clone is a part of a collection of human full
expression clones generated by BD Biosciences Clontech
Harvard Institute of Proteomics. Each CDS has been clon
forms: with and without stop-codon (to allow fusion will
tag). The CDS has been directionally cloned using BD
cloning system between the Sall and HindlII sites of
vector. Additional sequences in the clone: 'ACC' afte:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             olousto 669 bp mRNA linear SY.

S CDS clone is a part of a collection of human full length pression clones generated by BD Biosciences Clontech and the reach of lantitute of Proteomics. Each CDS has been cloned in two mas: with and without stop-codon (to allow fusion with C-terminal for the CDS has been cloned in two mas: with and without stop-codon (to allow fusion with C-terminal for the CDS has been cloned in two mas: with and without stop-codon (to allow fusion with C-terminal for the CDS has been the Sall and Hindill sites of the pDNR-DUAL corr. Additional sequences in the clone: 'ACC' after Sall site is before 'ATG' to provide Kozak consensus sequence; 'GG' after to codon and before Hindill site to maintain reading frame.

The present invention relates to secreted and transmembrane prefixes proteins and the DNA encoding them may be used as hybric probes, in chromosome and gene mapping and in the generation sense RNA and DNA. They may also be used used to generate eith transgenic animals or knockout animals which are in turn usefu development and screening of therapeutically useful reagents. acids may also be used in gene therapy
d and transmembrane proteins and nucleic acids designat as hybridization probes, in chromosome and gene mapping

The invention relates to human PRO polypeptides and the polynu encoding them. The sequences are useful in the preparation of medicament for treating a condition responsive to a PRO polype polypeptides are useful in a number of functional biological a molecular weight markers for protein electrophoresis and as th
                                                                                                                                                                                                                                                                                             Novel isolated PRO polypeptides e.g. PRO1491 and PRO1571, usef preparation of a medicament for treating a condition responsive polypeptide, and as therapeutic agents e.g. vaccines.
                                                                                                                                         Baker KP, Botstein D, Desnoyers L, Eaton DL, Ferrara N, Gao W, Goddard A, Godowski PJ, Grimaldi JC, Gurney AL, Pan J, Paoni NF, Roy MA, Smith V, Stewart TA, Tumas D, Williams PM, Wood WI;

polypeptides are useful for treating bone and/or cartilage disc (e.g., arthritis) and wound healing. PRO1130, PRO1275 and PRO12 polypeptides are useful for treating diabetes in skeletal muscl and obesity. PRO1265, PRO1244 and PRO1382 polypeptides are usel treating Berger disease or other nephropathies associated with Henoch purpura, coellac disease, dermatitis, herpetiformis or (disease. PRO1479, PRO1265, PRO1412, PRO1279, PRO1304, PRO1306, PRO1410 and PRO1575 are useful in treating thalassaemias. The I sequence encodes a PRO protein of the invention.

Sequence 907 BP; 322 A; 160 C; 179 G; 246 T; 0 U; 0 Other;

umbilical vein endothelial cells. PRO1265, PRO1250 and PRO1474

d and transmembrane PRO polypeptides useful for treating day disorders, Crohn's disease, diabetes mellitus, hyper- or nemia, sports injuries and arthritis.

Q ID NO 179; 557pp; English.

on relates to an isolated PRO polypeptide (secreted or ne protein) having at least 80% amino acid sequence dentity acid sequence chosen from 123 fully defined sequences as especification (including their extracellular domains either thair associated signal peptides. Also include are the (NA) sequences encoding PRO, a vector comprising the PRO NA, a omprising the vector, producing PRO, a chimaeric molecule PRO fused to a heterologous amino acid sequence, and an anti-y. Pro is useful as molecular weight markers for protein esis and also for chromosome identification. PRO is also tissue typing. PRO and PRO NA are useful as molecular weight markers for protein a cDNA library to isolate the full-length PRO cDNA. PRO NA is generating transgenic animals or knock-out animals which are evelopment and screening useful reagents. PRO NA is also ene therapy. PRO1244 PRO1286 and PRO1418 and PRO1410 are useful for treating cardiac insufficiency disorders. PRO1246 is also useful for treating cardiac insufficiency disorders. Pypeptide is also useful for treating cardiac insufficiency disorders.
